Population Health Promotion

Population Health Promotion (PHP)

A model of working, which identifies how a **population health** approach can be implemented through action on the full range of **health determinants** by means of **health promotion** strategies

Population Health Focus:

- Improve the health outcomes and wellbeing of an entire population*
- Reduce health inequalities

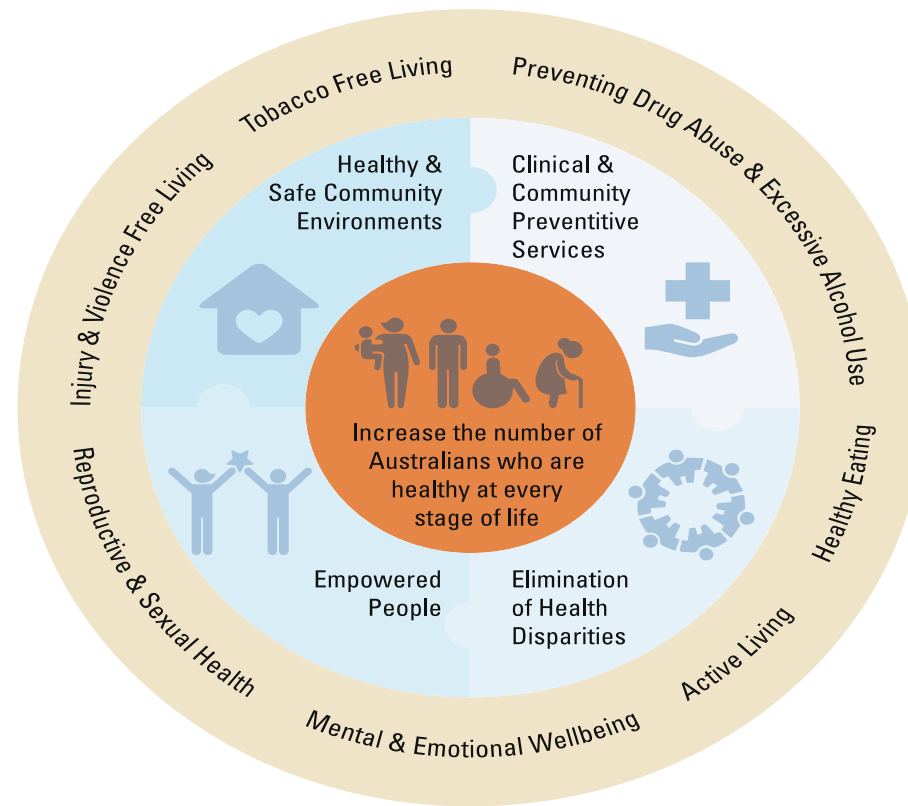

Health promotion strategies:

- Enable people to take control over their health/wellbeing
 - View health as a positive concept emphasizing social and personal resources
-
- Both emphasize community participation /mobilization and partnership working and determinants of health

Determinants of health

Partnerships

Building capacity across services

Supportive (smoke-free) environments

Workplace programs and policies

Social Marketing messages

Social media messages

School programs

Pregnant women and families

Why a population Health Approach?

- Recommended by WHO;
- Actions at all levels to be effective
- Important health gains come from focusing programs on the health of an entire population;
- Small gains for the many v. large gains for the few;
- Repetition to increase small effect over time;

3 minutes of influence

Clinical setting:
1xbrief intervention

Population Health promotion

Population Health Promotion Model

- Integrates health promotion and population health approach;
- Uses strategies enabling people to take control over & improve their health;
- Addresses the relationship between the determinants of health and how these influence the health of entire populations;
- Uses sectors of population health, the determinants of health, and strategies from the Ottawa Charter to guide action;
- Focuses on “whole populations” and “all factors that determine health”;
- Requires collaborative action.

Community based programs to improve and maintain population health and reduce inequalities in health
